

MATADERO

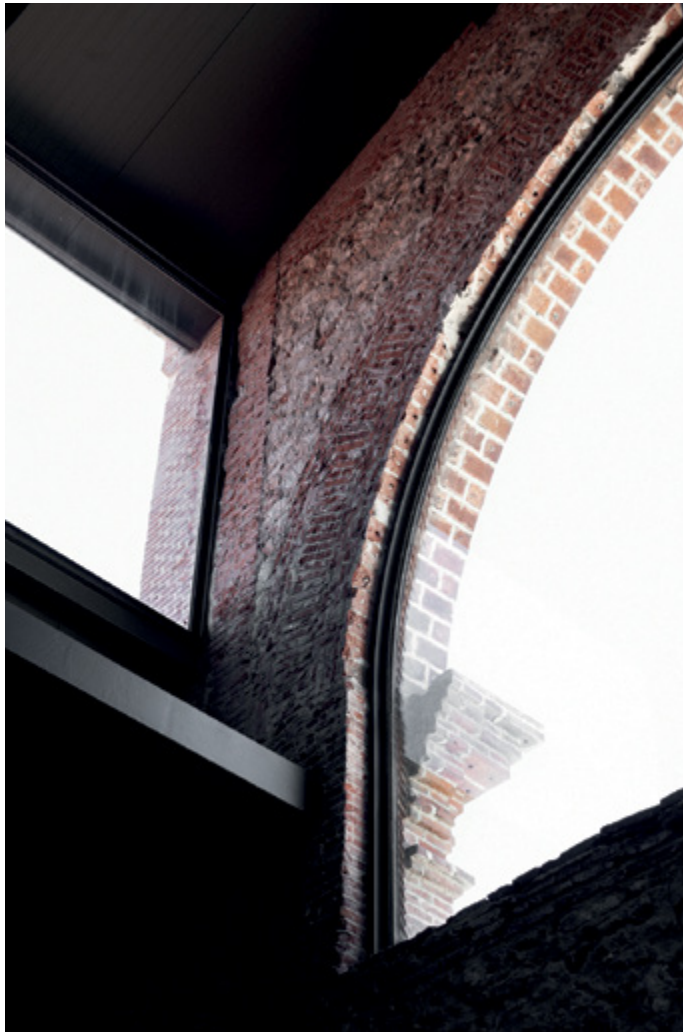

CENTRO DE CREACIÓN
CONTEMPORÁNEA

ARCHITECTURE

→EN

In a matter of a few short years, Matadero Madrid has become one of Madrid's most characteristic landscapes.

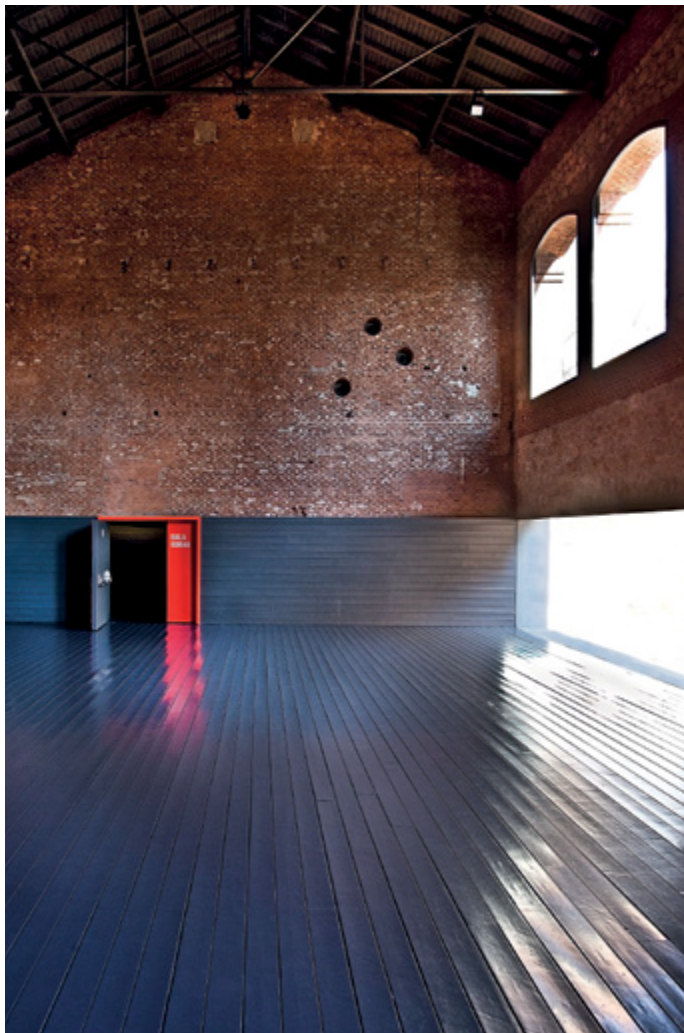

CONTEMPORARY ARCHITECTURE IN MADRID

Nave 16

Matadero Madrid is the Centre for Contemporary Creation of the Department of Culture, Tourism and Sports of the Madrid City Council. Created in 2006 in the city's former slaughterhouse and livestock market, it is a space of enormous value in terms of heritage and architecture.

Matadero occupies a part of the splendid complex of pavilions that was designed by architect Luis Bellido at the beginning of the 20th century: 48 buildings and 165,415 m² that were in use for almost six decades until 1995, when the industrial activities of the municipal slaughterhouse were transferred to Mercamadrid.

Cineteca Madrid

In 2005, the site was converted into a cultural centre and a series of architectural initiatives were undertaken in order to prepare the space as a venue for cultural activities. The site became a testing ground for architectural experimentation based on two clearly defined principles: on the one hand, the exterior envelope of each building had to be preserved and, on the other, all the projects had to be reversible to ensure that the spaces could be returned to their original state, if necessary. In this way, a series of works were carried out that succeeded in maintaining the traces of the past and respecting the heritage space to the greatest extent possible, while at the same time allowing the centre to host a wide range of cultural events.

The different refurbishment works at Matadero Madrid have aroused great interest around the world and have received such accolades as the prestigious Mies van der Rohe Award, as well as awards from the COAM, the FAD and the Spanish Architecture Biennial. Also of note is the role played by Matadero in the context of the Madrid Río Park, the architectural intervention in the area around the Manzanares River, which has received, among other awards, the International Architecture Award 2012 from the Chicago Athenaeum of Architecture and Design and the European Centre for Architecture Art Design and Urban Studies, the International Urban Design and Landscape Award granted by CICA, the International Committee of Architecture Critics as part of the 13th Buenos Aires Biennial; or the 2012 FAD Award in the City and Landscape category, among others.

Terrario. Nave 17

NAVE 17: INFORMATION, TERRARIO AND NAVE UNA

Architect:
ARTURO FRANCO
Year of inauguration:
2007

Arturo Franco and Fabrice van Teslaar, in collaboration with interior architect Diego Castellanos, are the authors of the refurbishment of 2,700 m² of floor space intended for different uses.

As the building was in a state of ruin when they found it, the architectural project explored the possibilities of rehabilitating it and in fact provided a new perspective on how to intervene in the historical heritage in a way that reduces any such intervention to the bare minimum. The basic concept of the project was the search for a balance between showing respect for the identity of the place itself and the incorporation of new elements capable of transforming its functionality. To this end, they decided to use industrial materials in their raw state or with only minimal modifications.

The intervention won the Building Rehabilitation Award in the 21st edition of the Urban Planning, Architecture and Public Works Awards 2006 of the Madrid City Council and in 2018 it received the COAM +10 Award.

Nave 0

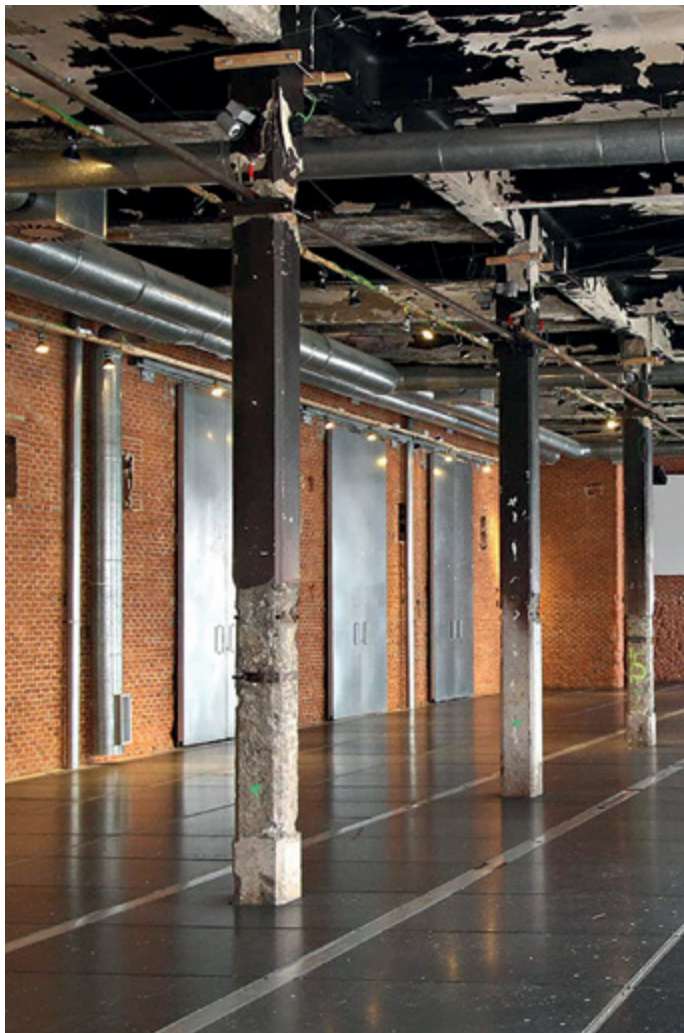

NAVE 0

UNINTERVENED SPACE

Year of inauguration:

2007

This rectangular 881 m² space, the former cold store of the municipal slaughterhouse, retains its original architectural layout, consisting of 36 reinforced concrete pillars arranged in four rows thus dividing the space into five sections. Nine horseshoe arches rest on the pillars of the central nave, supporting a brick vault. This space still retains its original appearance and its original hydraulic tile floor, as well as signs of a fire that broke out in the 1990s. Characterised by its diaphanous structure of cantilevered arches and columns, the elements that give this space its intimate character have been conserved and consolidated thanks to a policy of minimum intervention.

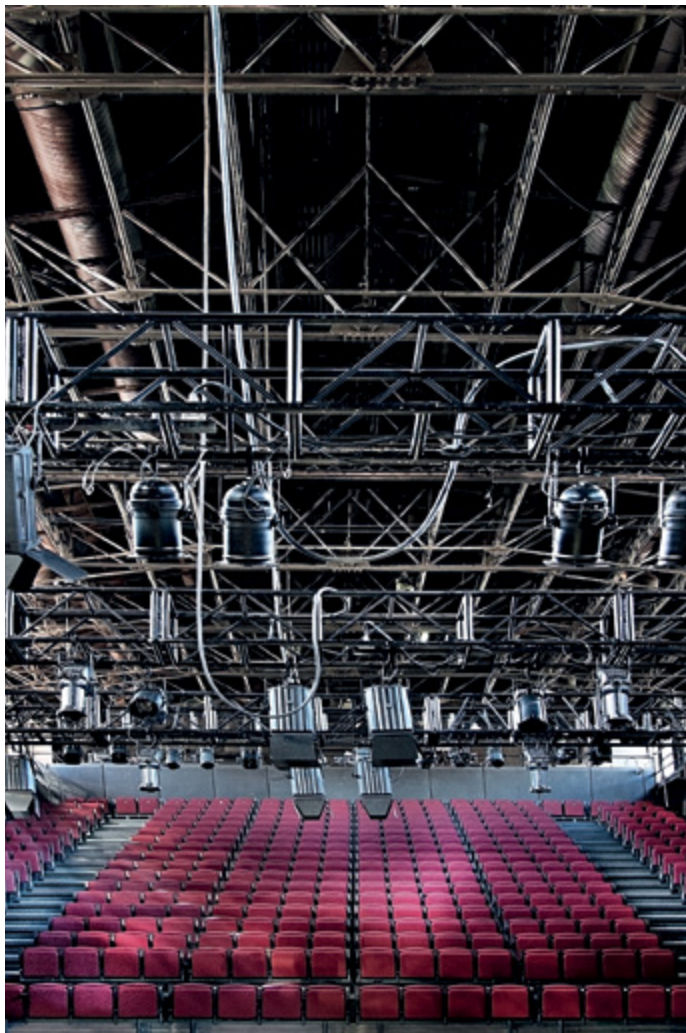

Central de Diseño

CENTRAL DE DISEÑO

Architect:
JOSÉ ANTONIO GARCÍA ROLDÁN
Year of inauguration:
2007

Central de Diseño's work consisted of maintaining the strength of the constructive decomposition of the elements by incorporating recycled and recyclable materials: removable polycarbonate for the light wall, industrial panels made from recycled car bumpers on the floor, galvanised iron and glass. This L-shaped complex regularly hosts exhibitions, festivals and workshops, and its different rooms also house a classroom, offices and storage space.

Nave 11

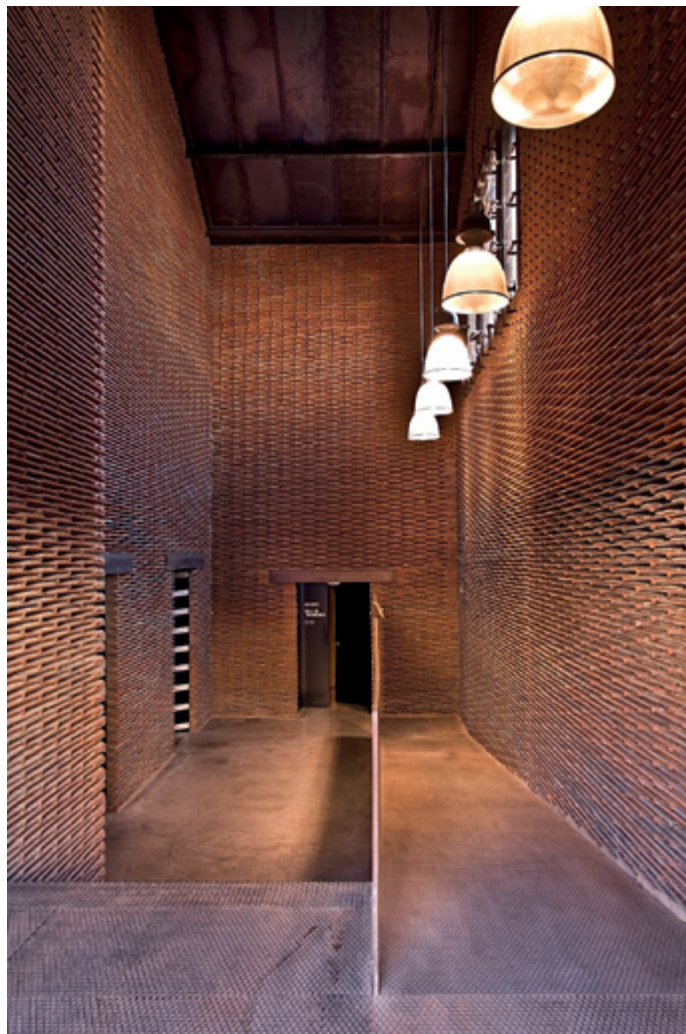

NAVES DEL ESPAÑOL

Architect:
EMILIO ESTERAS, JUSTO BENITO
Year of inauguration:
2007

This 5,900 m2 theatre complex (Naves 11 and 12) is the result of an interdisciplinary collaboration between theatre director Mario Gas, set designer Jean Guy Lecat (who has worked with Peter Brook in transforming a wide range of locations - a gas depot, a quarry or an abandoned factory - into extraordinary scenic spaces), technical set designer Francisco Fontanals, and municipal architect Emilio Esteras. Guided by the principles of reversibility, flexibility and versatility, the intervention endowed the space with myriad scenic configurations, introducing new elements and materials (polycarbonate and a scaffolding structure) that are juxtaposed to the existing ones and allow a clear reading of the interventions. A new space, Nave 10, was added to the theatre complex in 2009. Architect Justo Benito was in charge of its refurbishment.

EL TALLER AND LA OFICINA DE COORDINACIÓN

Architect:
ARTURO FRANCO
Year of inauguration:
2010

Oficina de Coordinación

This building consists of a multi-purpose space on the upper floor, called El Taller (The Workshop), and an office on the ground floor.

The architectural project is designed in such a way as to respect the original spatial configuration by intervening in a highly effective way using only a few elements. The interior spaces are clad with flat tiles that were recovered from the roof, which was in poor condition. The original tile roof was replaced and the entire inner space was reinforced by and finished with reclaimed wooden beams. The most innovative aspect of the work carried out is the fact that it is a bioclimatic project: the tiles contribute to the thermal, acoustic and sustainable comfort of the building, which has been reinvented with elements taken from the surrounding area.

Plaza Matadero

PLAZA AND CALLE MATADERO

Architects:
GINÉS GARRIDO, CARLOS RUBIO
Y FERNANDO PORRAS
Year of inauguration:
2011

Even though they are quite unique, Matadero Madrid is much more than just its buildings: it is also blessed with outdoor spaces that are just as interesting as the buildings themselves due to their size and urban quality.

The two large pedestrian spaces, Plaza Matadero and Calle Matadero, act as the cultural centre's great agora and forum. They are two spaces that are open to the public and serve to articulate the distribution of the different institutions that coexist within Matadero. They can be accessed from different points: Plaza de Legazpi, Paseo de la Chopera, Junta de Arganzuela (the District Council) and Madrid Río Park.

Designed as a pedestrian precinct, Calle Matadero is paved with cobblestones and granite footpaths on the same level, ideal for visitors to enjoy a stroll and the fresh air.

Devoid of trees and unlike any other space in the city of Madrid, Plaza Matadero is a large, empty, open space that has become an iconic venue for large-scale outdoor activities such as concerts, festivals and markets.

Nave 16

NAVE 16

Architects:
ALEJANDRO VIRSEDA,
JOSÉ IGNACIO CARNICERO
E IGNACIO VILA ALMAZÁN
Year of inauguration:
2011

Nave 16 is a versatile space of more than 4,000 m² divided into independent modules by large steel panels. As these panels can be moved by simply turning them, they ensure that the nave is multi-purpose and provide it with versatility in terms of lighting and ambience, making it adaptable to whatever activity is taking place inside.

In this way, the architectural project transformed the building into a large multi-purpose space and, at the same time, into a set of five smaller independent spaces.

The chromatism and texture of the tall steel panels stand in contrast to the tectonic and timeless character of the building's stone and brick envelope. When the panels are opened, a characteristic structure of thin metal profiles can be appreciated inside the envelope.

Water Tank

WATER TANK AND ACCESS TO LEGAZPI

Architects:

BCP INGENIEROS

(LUIS BENITO OLMEDA Y FRANCISCO
CALDERÓN), MARÍA LANGARITA
Y VÍCTOR NAVARRO

Year of inauguration:

2011

The elevated water tank was restored and structurally reinforced in order to conserve what is one of the site's most iconic elements. Freed of its original functionality, it is now a visual landmark and one of the cultural centre's main elements of communication.

A new lighting system, the labelling of the tank and its transformation into a welcoming space define this public access to Matadero Madrid from Legazpi. A garden of selected plants has been laid out on a platform between the pillars of the tank's shaft.

CINETECA, ARCHIVE AND CANTEEN

Architects:
JOSÉ MARÍA CHURTICHAGA Y
CAYETANA DE LA QUADRA SALCEDO
Year of inauguration:
2011

Cineteca Madrid.

Covering an area of 2,688 m2, the work that was carried out on Cineteca Madrid managed to preserve the existing spatial structure which was transformed and distributed into five different spaces: two screening rooms, a film set, an archive and a canteen. There is also an outdoor terrace. The old and the new coexist in an atmosphere of half-light in which artificial LED lights and film screenings are of the essence. Worthy of mention within the complex are the baskets that have been woven from irrigation hoses to serve as a luminescent element that throws light onto the ceilings and walls of the screening rooms and the archive.

Casa del Lector

CASA DEL LECTOR

Architects:
ANTÓN GARCÍA ABRIL
Year of inauguration:
2012

The essential aim of this architectural project was to connect people, both the general public and professionals, as well as ideas, spaces and places. With their elongated design, Naves 13 and 14 are connected transversally by means of pre-stressed concrete beam bridges, creating a meeting point between the two structures. The Casa del Lector, which covers an area of rather more than 8,000 m², hosts activities related to reading and literature in general, ranging from printed paper to new media and from the linguistic to the audiovisual, paying special interest to the role played by new technologies and media. In order to carry out its activities, the Casa del Lector has training rooms, a library and consultation area, workshops, rooms designed to encourage people to read, radio and TV sets, an exhibition room and an auditorium that can seat 300 people.

Casa del Lector. Vestíbulo

PREMIOS

2012

- Nave 16 y Nave de Música (actualmente en proceso de rehabilitación). Finalistas de los premios FAD de Arquitectura.
- Cineteca y Archivo, y Nave 16. Premios COAM
- Madrid Río. International Architecture Award 2012 del Chicago Athenaeum of Architecture and Design; European Centre for Architecture Art Design and Urban Studies; Premio de Diseño Urbano y Paisajismo Internacional del Comité de Críticos de Arquitectura CICA, en el marco de la XIII Bienal de Buenos Aires; Premio FAD de Ciudad y Paisaje 2012, entre otros.

2013

- Nave de Música (actualmente en proceso de rehabilitación). Mención Especial del Premio Mies Van der Rohe (UE) Cineteca Madrid. Premio de la Bienal Española de Arquitectura en el apartado de reconversión y reutilización de edificios.

2014

- Matadero Madrid. Finalista Premio Europeo de Intervención en el Patrimonio Arquitectónico AADIPA en la categoría Intervención en el patrimonio construido.

2015

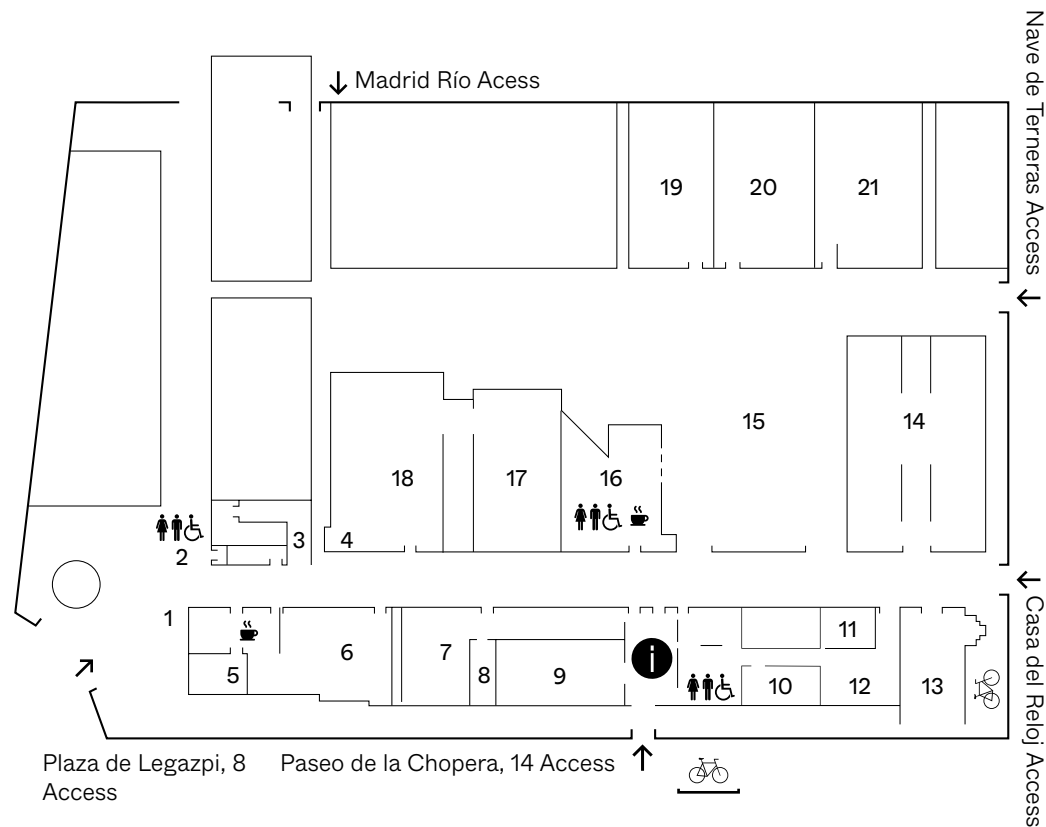

- Factoría Cultural (Actualmente Aulario de Nave 17). Premio COAM

2018

- Rehabilitación Nave 17C-Intermediae (Actualmente Nave 17). Premio COAM +10, destinado a obras que siguen siendo emblemáticas tras diez años.

LOCATIONS

- i** Information
- 1 Water Tank / Placita
- 2 Matadero Box office
- 3 El Taller

- 20 Nave 16. Immersive experience center MAD box office
- 21 Nave 16. Artistic residencies center

How to arrive:

EMT buses: 6, 8, 18, 19, 45, 78 & 148

The complex can also be reached by train (Cercanías). The closest station is Embajadores, located 1.3 kilometers away from Matadero Madrid. The neighboring Plaza de Legazpi has a permanent taxi stop.

OPENING TIMES

OPEN AIR SPACES

Plaza Matadero | Calle Matadero | Placita

Free entrance

Regular hours: Monday to Sunday 9am to 10pm

From 10pm onwards, the entrance and exit to and from the site will be through the Plaza de Legazpi access

INFORMATION POINT

Paseo de la Chopera, 14

Monday to Sunday 9:30am to 9:30pm

EXHIBITIONS

Nave 16. Exhibitions, Nave 0, Nave 17, Nave Una

Free entrance until maximum capacity is reached*

Capacity subject to current regulations

Tuesday to Thursday 5pm to 9pm. Closed on Mondays

Fridays, Saturdays, Sundays and holidays from 12 noon to 9pm.

* Except for Madrid Artes Digitales exhibitions

Centre for Immersive Experiences MAD (Madrid Artes Digitales)

Monday from 4pm to 8:45pm

Tuesday to Thursday from 10am to 8:45pm

Fridays and Saturdays from 10am to 9:45pm

Sundays from 10am to 8:45pm

BOX OFFICE

Located in front of the water tank, access Plaza de Legazpi

Tuesday to Sunday 4:30pm to 8:30pm or until the beginning of the activity
